

Title:  
"Big Data for collaborative decision  
making."

Abstract:

Big and Open Data combined with data analytics promises a better understanding of the social and the identification of both positive and negative trends as well as the identification of indicators and causal relationships that can be used to manage organisations and improve government.

Based on an empirical project on data driven decision making in urban renewal, the talk will discuss how decision are made and how data analytics can be brought to bear on collaborative and participative decision making.
